Property address	2 The Chanonry Aberdeen AB24 1RP
Seller(s)	Frederick Angest & Lady Angest
Completion date of property questionnaire	04/10/2024

Note for sellers

- Please complete this form carefully. It is important that your answers are correct.
- The information in your answers will help ensure that the sale of your house goes smoothly. Please answer each question with as much detailed information as you can.
- If anything changes after you fill in this questionnaire but before the date of entry for the sale of your house, tell your solicitor or estate agent immediately.

Information to be given to prospective buyer(s)

1.	Length of ownership		
	How long have you owned the property? 10 years		10 years
2.	Council tax		
	Which Council Tax band is your prop	erty in?	G
3.	Parking		
	What are the arrangements for parki	ng at your property?	
	(Please tick all that apply)		
	Garage	Yes	
	Allocated parking space	Yes	
	• Driveway		
	Shared parking		
	On street		
	Resident permit		
	Metered Parking		
	Other (please specify):		
	Own double garage at the	ne back of the house	
4.	Conservation area		
	Is your property in a designated Con special architectural or historical int which it is desirable to preserve or e	erest, the character or appear	a of Yes ance of

5.	Listed buildings	
	Is your property a Listed Building, or contained within one (that is a building recognised and approved as being of special architectural or historical interest)?	Yes
6.	Alterations/additions/extensions	,
a.	(i) During your time in the property, have you carried out any structural alterations, additions or extensions (for example, provision of an extra bath/shower room, toilet, or bedroom)?	No
	If you have answered yes, please describe below the changes which you have made:	
	(ii) Did you obtain planning permission, building warrant, completion certificate and other consents for this work?	
	If you have answered yes, the relevant documents will be needed by the purchaser and you should give them to your solicitor as soon as possible for checking.	
	If you do not have the documents yourself, please note below who has these documents and your solicitor or estate agent will arrange to obtain them:	
b.	Have you had replacement windows, doors, patio doors or double glazing installed in your property?	No
	If you have answered yes, please answer the three questions below:	
	(i) Were the replacements the same shape and type as the ones you replaced?	
	(ii) Did this work involve any changes to the window or door openings?	
	(iii) Please describe the changes made to the windows doors, or patio doors approximate dates when the work was completed):	(with
	Please give any guarantees which you received for this work to your solicito agent.	r or estate
7.	Central heating	
a.	Is there a central heating system in your property? (Note: a partial central heating system is one which does not heat all the main rooms of the property — the main living room, the bedroom(s), the hall and the bathroom).	Yes
	If you have answered yes or partial – what kind of central heating is there? (Examples: gas-fired, solid fuel, electric storage heating, gas warm air).	
	Gas	

	i) When was your central hea installed?	ting system or partial	central heating system	
	unknown			
	(ii) Do you have a maintenan	ce contract for the ce	ntral heating system?	No
	If you have answered yes, ple you have a maintenance con		e company with which	
	(iii) When was your maintena (Please provide the month ar		enewed?	
8.	Energy Performance Certification	ate		
	Does your property have an than 10 years old?	Energy Performance (Certificate which is less	No
9.	Issues that may have affected	d your property		·
а.	Has there been any storm, flood, fire or other structural damage to the property while you have owned it?		No	
	If you have answered yes, is the damage the subject of any outstanding insurance claim?			
b.	Are you aware of the existence of the ex	•	r property?	No
10.	Services			
a.	Please tick which services are connected to your property and give details supplier:		property and give details o	of the
	Services	Connected	Supplier	
	Gas or liquid petroleum gas	Yes	Ovo Energy	
	Water mains or private water supply	Yes	Scottish Water	
	Electricity	Yes	Ovo Energy	
	Mains drainage	Yes	Local Authority	
		1	I	

	Cable TV or satellite	No	
	Broadband	No	
b.	Is there a septic tank system at your property?		
	If you have answered yes, please answer the two questions below:		
	(i) Do you have appropriate consents for the discharge from your septic tank?		
	(ii) Do you have a mainter	nance contract for your septic tank?	
	If have answered yes, det maintenance contract:	ails of the company with which you have a	
11.	Responsibilities for share	ed or common areas	
a.		sponsibility to contribute to the cost of anything repair of a shared drive, private road, a?	No
	If you have answered ye	<u>s,</u> please give details:	
b.	Is there a responsibility roof, common stairwell of	to contribute to repair and maintenance of the or other common areas?	No
	If you have answered ye	<u>s,</u> please give details:	
C.	Has there been any major during the time you have	repair or replacement of any part of the roof owned the property?	No
d.		walk over any of your neighbours'property — our rubbish bin or to maintain your	No
	If you have answered ye	<u>s,</u> please give details:	
e.		do any of your neighbours have the right to for example to put out their rubbish bin or to es?	No
	If you have answered ye	<u>s,</u> please give details:	
f.	your property? (public ri	is there a public right of way across any part of ight of way is a way over which the public has a not the land is privately-owned.)	No
	If you have answered ye	s, please give details:	

12.	Charges associated with the property	
a.	Is there a factor or property manager for your property? If you have answered yes, please provide the name and address, and give details of any deposit held and approximate charges:	No
b.	Is there a common buildings insurance policy?	No
	If you have answered yes, is the cost of the insurance included in monthly/annual factor's charges?	
C.	Please give details of any other charges you have to pay on a regular baupkeep of common areas or repair works, for example to a residents' as or maintenance or stair fund.	
13.	Specialist work	
a.	As far as you are aware, has treatment of dry rot, wet rot, damp or any other specialist work ever been carried out to your property?	No
	If you have answered yes, please say what the repairs were for, whether you carried out the repairs (and when) or if they were done before you bought the property.	
b.	As far as you are aware, has any preventative work for dry rot, wet rot, or damp ever been carried out to your property?	No
	If you have answered yes, please give details:	
C.	If you have answered yes to 13(a) or (b), do you have any guarantees relating to this work?	
	If you have answered yes, these guarantees will be needed by the purchaser and should be given to your solicitor as soon as possible for checking. If you do not have them yourself please write below who has these documents and your solicitor or estate agent will arrange for them to be obtained. You will also need to provide a description of the work carried out. This may be shown in the original estimate.	
	Guarantees are held by:	
14.	Guarantees	
a.	Are there any guarantees or warranties for any of the following?	
	(i) Electrical work	No
	(ii) Roofing	No
	(iii) Central heating	No
	(iv) National House Building Council (NHBC)	No

	(v) Damp course	No
	(vi) Any other work installations? (for example, cavity wall installation, underpinning, indemnity policy)	No
b.	If you have answered 'yes' or 'with title deeds', please give details of the work or installations to which the guarantee(s) relate(s):	
C.	Are there any outstanding claims under any of the guarantees listed above? If you have answered yes, please give details:	No
15.	Boundaries	
	So far as you are aware, has any boundary of your property been moved in thelast 10 years?	No
	If you have answered yes, please give details:	
16.	Notices that affect your property	
	In the past three years have you ever received a notice:	
a.	advising that the owner of a neighbouring property has made a planning application?	No
b.	that affects your property in some other way?	No
C.	that requires you to do any maintenance, repairs or improvements to your property?	No
	If you have answered yes to any of a-c above, please give the notices to yo or estate agent, including any notices which arrive at any time before the d of the purchaser of your property.

PART 1 - GENERAL

1.1 THE SURVEYORS

The Seller has engaged the Surveyors to provide the Single Survey Report and a generic Mortgage Valuation Report for Lending Purposes. The Seller has also engaged the Surveyors to provide an Energy Report in the format prescribed by the accredited Energy Company.

The Surveyors are authorised to provide a transcript or retype of the generic Mortgage Valuation Report on to Lender specific pro-forma. Transcript reports are commonly requested by Brokers and Lenders. The transcript report will be in the format required by the Lender but will contain the same information, inspection date and valuation figure as the generic Mortgage Valuation Report and the Single Survey. The Surveyors will decline any transcript request which requires the provision of information additional to the information in the Report and the generic Mortgage Valuation Report until the Seller has conditionally accepted an offer to purchase made in writing.

Once the Seller has conditionally accepted an offer to purchase made in writing, the Purchaser's lender or conveyancer may request that the Surveyors provide general comment on standard appropriate supplementary documentation. In the event of a significant amount of documentation being provided to the Surveyors, an additional fee may be incurred by the Purchaser. Any additional fee will be agreed in writing.

If information is provided to the Surveyors during the conveyancing process which materially affects the valuation stated in the Report and generic Mortgage Valuation Report, the Surveyors reserve the right to reconsider the valuation. Where the Surveyors require to amend the valuation in consequence of such information, they will issue an amended Report and generic Mortgage Valuation Report to the Seller. It is the responsibility of the Seller to ensure that the amended Report and generic Mortgage Valuation Report are transmitted to every prospective Purchaser.

The individual Surveyor will be a member of the Royal Institution of Chartered Surveyors who is competent to survey, value and report upon Residential Property¹.

If the Surveyors have had a previous business relationship within the past two years with the Seller or Seller's Agent or relative to the property, they will be obliged to indicate this by marking the adjacent box.

Х

The Surveyors have a written complaints handling procedure. This is available from the offices of the Surveyors at the address stated.

1.2 THE REPORT

The Surveyors will not provide an amended Report on the Property, except to correct factual inaccuracies.

The Report will identify the nature and source of information relied upon in its preparation.

The Surveyor shall provide a Market Value of the Property, unless the condition of the Property is such that it would be inappropriate to do so. A final decision on whether a loan will be granted rests with the Lender who may impose retentions in line with their lending criteria. The date of condition and value of the property will be the date of inspection.

Prior to 1 December 2008, Purchasers have normally obtained their own report from their chosen Surveyor. By contrast, a Single Survey is instructed by the Seller and made available to all potential Purchasers in expectation that the successful Purchaser will have relied upon it. The Royal Institution of Chartered Surveyors rules require disclosure of any potential conflict of interest when acting for the Seller and the Purchaser in the same transaction. The Single Survey may give rise to a conflict of interest and if this is of concern to any party they are advised to seek their own independent advice.

The Report and any expressions or assessments in it are not intended as advice to the Seller or Purchaser or any other person in relation to an asking price or any other sales or marketing decisions.

¹ Which shall be in accordance with the current RICS Valuation Standards (The Red Book) and RICS Rules of Conduct.

The Report is based solely on the Property and is not to be relied upon in any manner whatsoever when considering the valuation or condition of any other property.

If certain minor matters are mentioned in the Report it should not be assumed that the Property is free of other minor defects.

Neither the whole nor any part of the Report may be published in any way, reproduced or distributed by any party other than the Seller, prospective purchasers and the Purchaser and their respective professional advisers without the prior written consent of the Surveyors.

1.3 LIABILITY

The Report is prepared with the skill and care reasonably to be expected of a competent residential surveyor who is a member of the Royal Institution of Chartered Surveyors.

The Report is addressed to the Seller and was prepared in the expectation that it (or a complete copy) along with these Terms and Conditions (or a complete copy) would (or, as the case might be, would have been) be disclosed and delivered to:

- the Seller:
- any person(s) noting an interest in purchasing the Property from the Seller;
- any person(s) who make(s) (or on whose behalf is made) an offer to purchase the Property, whether
 or not that offer is accepted by the Seller;
- the Purchaser; and
- the professional advisers of any of these.

The Surveyors acknowledge that their duty of skill and care in relation to the Report is owed to the Seller and to the Purchaser. The Surveyors accept no responsibility or liability whatsoever in relation to the Report to persons other than the Seller and the Purchaser. The Seller and Purchaser should be aware that if a Lender seeks to rely on this Report they do so at their own risk. In particular, the Surveyors accept no responsibility or liability whatsoever to any Lender in relation to the Report. Any such Lender relies upon the Report entirely at their own risk.

1.4 GENERIC MORTGAGE VALUATION REPORT

The Surveyors undertake to the Seller that they will prepare a generic Mortgage Valuation Report, which will be issued along with the Single Survey. It is the responsibility of the Seller to ensure that the generic Mortgage Valuation Report is provided to every potential Purchaser.

1.5 TRANSCRIPT MORTGAGE VALUATION FOR LENDING PURPOSES

The Surveyors undertake that on being asked to do so by a prospective purchaser, or his/her professional advisor or Lender, they will prepare a Transcript Mortgage Valuation Report for Lending Purposes on terms and conditions to be agreed between the Surveyors and Lender and solely for the use of the Lender and upon which the Lender may rely. The decision as to whether finance will be provided is entirely a matter for the Lender. The Transcript Mortgage Valuation Report will be prepared from information contained in the Report and the generic Mortgage Valuation Report².

1.6 INTELLECTUAL PROPERTY

All intellectual property rights whatsoever (including copyright) in and to the Report, excluding the headings and rubrics, are the exclusive property of the Surveyors and shall remain their exclusive property unless

² Which shall be in accordance with the current RICS Valuation Standards (The Red Book) and RICS Rules of Conduct.

they assign the same to any other party in writing.

1.7 PAYMENT

The Surveyors are entitled to refrain from delivering the Report to anyone until the fee and other charges for it notified to the Seller have been paid. Additional fees will be charged for subsequent inspections and Reports.

1.8 CANCELLATION

The Seller will be entitled to cancel the inspection by notifying the Surveyor's office at any time before the day of the inspection.

The Surveyor will be entitled not to proceed with the inspection (and will so report promptly to the Seller) if after arriving at the property, the Surveyor concludes that it is of a type of construction of which the Surveyor has insufficient specialist knowledge to be able to provide the inspection satisfactorily. The Surveyor will also be entitled not to proceed if after arriving at the property, the surveyor concludes that the property is exempt under Part 3 of The Housing (Scotland) Act 2006 as detailed in the (Prescribed Documents) Regulations 2008. If there is a potential threat to their health or personal safety, the inspection may be postponed or cancelled, at the Surveyor's discretion.

In the case of cancellation or the inspection not proceeding, the Surveyor will refund any fees paid by the Seller for the inspection and Report, except for expenses reasonably incurred and any fee due in light of the final paragraph of this section.

In the case of cancellation by the Seller, for whatever reason, after the inspection has taken place but before a written report is issued, the Surveyor will be entitled to raise an invoice equivalent to 80% of the agreed fee.

1.9 PRECEDENCE

If there is any incompatibility between these Terms and Conditions and the Report, these Terms and Conditions take precedence.

1.10 DEFINITIONS

- the "Lender" is the party who has provided or intends or proposes to provide financial assistance to the Purchaser towards the purchase of the Property and in whose favour a standard security will be granted over the Property;
- the "Transcript Mortgage Valuation Report for Lending Purposes" means a separate report, prepared by the Surveyor, prepared from information in the Report and the generic Mortgage Valuation Report, but in a style and format required by the Lender. The Transcript Mortgage Valuation Report for Lending Purposes will be prepared with the skill and care reasonably to be expected from a surveyor who is a member of the Royal Institution of Chartered Surveyors and who is competent to survey, value and report on the Property;
- the "Generic Mortgage Valuation Report" means a separate report, prepared by the Surveyor from information in the Report but in the Surveyor's own format;
- the "Market Value" is the estimated amount for which a property should exchange on the date of valuation between a willing buyer and a willing seller in an arm's-length transaction after proper marketing wherein the parties had each acted knowledgeably, prudently and without compulsion;
- the "Property" is the property which forms the subject of the Report;
- the "Purchaser" is the person (or persons) who enters into a contract to buy the Property from the Seller;

- a "prospective Purchaser" is anyone considering buying the Property;
- the "Report" is the report, of the kind described in Part 2 of these Terms and Conditions and in the form set out in part 1 of Schedule 1 of the Housing (Scotland) Act 2006 (Prescribed Documents) Regulations 2008;
- the "Seller" is/are the proprietor(s) of the Property;
- the "Surveyor" is the author of the Report on the Property; and
- the "Surveyors" are the firm or company of which the Surveyor is an employee, director, member or partner (unless the Surveyor is not an employee, director, member or partner, when the "Surveyors" means the Surveyor) whose details are set out at the head of the Report.
- the "Energy Report" is the advice given by the accredited Energy Company, based on information collected by the Surveyor during the Inspection, and also includes an Energy Performance Certificate, in a Government approved format.

PART 2 - DESCRIPTION OF THE REPORT

2.1 THE SERVICE

The Single Survey is a Report by an independent Surveyor, prepared in an objective way regarding the condition and value of the Property on the day of the inspection, and who is a member of the Royal Institution of Chartered Surveyors. It includes an Energy Report as required by Statute and this is in the format of the accredited Energy Company. In addition, the Surveyor has agreed to supply a generic Mortgage Valuation Report.

2.2 THE INSPECTION

The Inspection is a general surface examination of those parts of the Property which are accessible: in other words, visible and readily available for examination from ground and floor levels, without risk of causing damage to the Property or injury to the Surveyor.

All references to visual inspection refer to an inspection from within the property at floor level and from ground level within the site and adjoining public areas, without the need to move any obstructions. Any references to left or right are taken facing the front of the property.

The Inspection is carried out with the Seller's permission, without causing damage to the building or contents. Furniture, stored items and insulation are not moved.

Unless identified in the report the Surveyor will assume that no harmful or hazardous materials have been used in the construction. The presence or possible consequences of any site contamination will not be researched.

The Surveyor will not carry out an asbestos inspection, and will not be acting as an asbestos inspector in completing a Single Survey of properties that may fall within the Control of Asbestos in the Workplace Regulations. In the case of flats it will be assumed that there is a duty holder, as defined in the Regulations and that a Register of Asbestos and effective Management Plan is in place, which does not require any expenditure, or pose a significant risk to health. No enquiry of the duty holder will be made.

2.3 THE REPORT

The Report will be prepared by the Surveyor who carried out the property inspection and will describe various aspects of the property as defined by the headings of the Single Survey report with the comments

being general and unbiased. The report on the location, style and condition of the property, will be concise and will be restricted to matters that could have a material effect upon value and will omit items that, in the Surveyor's opinion, are not significant. If certain minor matters are mentioned, it should not be interpreted that the property is free of any other minor defects.

Throughout the Report, the following repair categories will be used to give an overall opinion of the state of repair and condition of the property.

- 1 <u>Category 3:</u> Urgent repairs or replacement are needed now. Failure to deal with them may cause problems to other parts of the property or cause a safety hazard. Estimates for repairs or replacement are needed now.
- 2 <u>Category 2:</u> Repairs or replacement requiring future attention, but estimates are still advised.
- 3 Category 1: No immediate action or repair is needed.

WARNING: If left unattended, even for a relatively short period, Category 2 repairs can rapidly develop into more serious Category 3 repairs. The existence of Category 2 or Category 3 repairs may have an adverse effect on marketability, value and the sale price ultimately achieved for the property. This is particularly true during slow market conditions when the effect can be considerable.

Parts of the property, which cannot be seen or accessed, will not be reported upon and this will be stated. If the Surveyor suspects that a defect may exist within an unexposed area and which could have a material effect upon the value, he may recommend further investigation by specialist contractors.

2.4 SERVICES

Surveyors are not equipped or qualified to test the services and therefore no comment can be interpreted as implying that the design, installation and function of the services are in accordance/compliance with regulations, safety and efficiency expectations. However, comment is made where there is cause to suspect significant defects or shortcomings with the installations. No tests are made of any services or appliances.

2.5 ACCESSIBILITY

A section is included to help identify the basic information interested parties need to know to decide whether to view a property.

2.6 ENERGY REPORT

A section is included that makes provision for an Energy Report, relative to the property. The Surveyor will collect physical data from the property and provide such data in a format required by an accredited Energy Company. The Surveyor cannot of course accept liability for any advice given by the Energy Company.

2.7 VALUATION AND CONVEYANCER ISSUES

The last section of the Report contains matters considered relevant to the Conveyancer (Solicitor). It also contains the Surveyor's opinion both of the market value of the property and of the re-instatement cost, as defined below.

"Market Value" The estimated amount for which a property should exchange on the date of valuation between a willing buyer and a willing seller in an arm's-length transaction after proper marketing wherein the parties had each acted knowledgeably, prudently and without compulsion. In arriving at the opinion of the Market Value the Surveyor also makes various standard assumptions covering, for example, vacant possession; tenure and other legal considerations; contamination and hazardous materials; the condition of un-inspected parts; the right to use mains services; and the exclusion of curtains, carpets etc. from the valuation. In the case of flats, the following further assumptions are made that:

There are rights of access and exit over all communal roadways, corridors, stairways etc. and to use

communal grounds, parking areas, and other facilities;

- There are no particularly troublesome or unusual legal restrictions;
- There is no current dispute between the occupiers of the flats or any outstanding claims or losses; and the costs of repairs to the building are shared among the co-proprietors on an equitable basis.

Any additional assumption, or any found not to apply, is reported.

"Re-instatement cost" is an estimate for insurance purposes of the current cost of rebuilding the Property in its present form unless otherwise stated. This includes the cost of rebuilding the garage and permanent outbuildings, site clearance and professional fees, but excludes VAT (except on the fees).

Sellers or prospective Purchasers may consider it prudent to instruct a reinspection and revaluation after a period of 12 weeks (or sooner if appropriate) to reflect changing circumstances in the market and/or in the physical condition of the Property.

1. Information and scope of inspection

This section tells you about the type, accommodation, neighbourhood, age and construction of the property. It also tells you about the extent of the inspection and highlights anything that the surveyor could not inspect.

All references to visual inspection refer to an inspection from within the property without moving any obstructions and externally from ground level within the site and adjoining public areas. Any references to left or right in a description of the exterior of the property refer to the view of someone standing facing that part of the property from the outside.

The inspection is carried out without causing damage to the building or its contents and without endangering the occupiers or the surveyor. Heavy furniture, stored items and insulation are not moved. Unless identified in the report the surveyor will assume that no harmful or hazardous materials or techniques have been used in the construction. The presence or possible consequences of any site contamination will not be researched.

Services such as TV/cable connection, internet connection, swimming pools and other leisure facilities etc. will not be inspected or reported on.

Description	The subjects comprise a two storey, attic and basement detached house extended to the rear in a one storey projection and to the side in a further one storey projection.
Accommodation	GROUND FLOOR - Games Room GROUND FLOOR - Entrance Porch, Hall, Living Room,
	Dining Kitchen, Sitting/Dining Room, Bedroom, Shower Room, Utility Room, Rear Hall.
	FIRST FLOOR - Landing, 3 Bedrooms (two of which have an interconnecting bathroom).
	ATTIC FLOOR - Landing, 2 Bedrooms.
Gross internal floor area (m²)	The gross internal floor area extends to 277 sq.m or thereby (including the games room within the lower ground floor).
Neighbourhood and location	The subjects form part of a mixed commercial and residential area located a short distance to the north of Aberdeen City Centre, on the periphery of the University of Aberdeen campus. The subjects do lie immediately adjacent to St. Machar Drive which is a reasonably busy thoroughfare within the city. Adequate facilities and amenities may be found within reasonable distance.
	- "
Age	Built circa 1780.
Weather	At the date of inspection the weather was dry.

Chimney stacks

Visually inspected with the aid of binoculars where appropriate.

The chimneys are of solid stone and part brick construction, cement pointed. There are clay chimney cans bedded in cement haunchings. The chimneys are sealed to the main roof with metal flashings and cement skews. Our inspections were restricted due to the height and configuration of the building.

Roofing including roof space

Sloping roofs were visually inspected with the aid of binoculars where appropriate.

Flat roofs were visually inspected from vantage points within the property and where safe and reasonable to do so from a 3m ladder externally.

Roof spaces were visually inspected and were entered where there was safe and reasonable access, normally defined as being from a 3m ladder within the property.

If this is not possible, then physical access to the roof space may be taken by other means if the Surveyor deems it safe and reasonable to do so.

The roof over the original building is of pitched profile, clad with slates and incorporating tiled ridges along with cement skews and metal flashings. The roof further incorporates slate clad dormer projections to the front pitch. To the rear the dormer projection is of a shallow pitched profile, clad with mineral felt.

The roof over the side projection would appear to be of pitched profile, clad with slates. The roof over the rear projection is of part pitched profile, slate clad with a flat top, clad with mineral felt.

Restricted roof void inspections were carried out via the ceiling hatches within the second floor bedrooms. Where seen, the roof is of traditional timber construction. There are timber sarking boards and where seen, it would appear that felt has been laid above the sarking timbers and below the slates. The roof void area has been insulated at joist level. No further roof void inspections were possible.

Rainwater fittings

Visually inspected with the aid of binoculars where appropriate.

The rainwater goods are of cast iron.

Main walls	Visually inspected with the aid of binoculars where appropriate.
	Foundations and concealed parts were not exposed or inspected.
	The main walls to the original building are of solid stone construction, cement pointed. The main walls to the extensions would appear predominantly of stone construction with some brick and cement pointed areas.
Windows, external doors and joinery	Internal and external doors were opened and closed where keys were available.
	Random windows were opened and closed where possible.
	Doors and windows were not forced open.
	The windows are mainly of timber single glazed, sash and casement design some of which incorporate secondary glazed units. There are also timber double glazed Velux windows and a metal skylight. The front door to the property is of timber panel design. There is a further timber panel external door to the side along with timber panel external doors from the north most projection. Externally there are areas of timber cladding.
External decorations	Visually inspected.
External accordions	
	The external timbers have a painted finish.
Conservatories / porches	Visually inspected.
	There is an entrance porch to the front. There is a concrete base with timber frame and clad panels under a flat felt roof.
Communal areas	N/A
	14/13

Garages and permanent outbuildings Visually inspected. There is an attached double garage to the rear of the subjects which would appear of infill construction, with brick built onto the original stone boundary wall. The roof is of profile sheet metal. Internally, there is a solid concrete floor and the walls are unlined. The garage benefits from power and light. There are two metal vehicular access doors, one of which was tested. There is a storage area to the side which can be accessed via an external door or via the basement cellars. The store would appear of brick construction, cement pointed under a pitched and slate clad roof. No access was gained to the southern most section of the store. **Outside areas and boundaries** Visually inspected. The subjects occupy an irregular shaped site with areas of garden to the front along with a yard area to the side and rear. There is a further area of garden ground accessed to the rear of the north most projection, although no access was gained to the area as the door was locked at the time of inspection. Boundaries to the site would appear to be defined by part stone and part brick walls, cement pointed. The exact boundaries should be confirmed with reference to the Title Deeds. Ceilings Visually inspected from floor level. Ceilings are of plasterboard and of timber lath and plaster. Within the dining room area to the side projection, the ceiling has been lined with timber panels. Internal walls Visually inspected from floor level. Using a moisture meter, walls were randomly tested for dampness where considered appropriate.

Internal walls are of plasterboard and of timber lath and plaster. Within the north most, single storey projection there

is an area of exposed masonry.

Single Survey Floors including sub floors Surfaces of exposed floors were visually inspected. No carpets or floor coverings were lifted. Sub-floor areas were inspected only to the extent visible from a readily accessible and unfixed hatch by way of an inverted "head and shoulders" inspection at the access point. Floors are of suspended timber construction, overlaid with fitted floor coverings. No sub-floor inspection was possible as the ceiling within the basement area has been plastered. Internal joinery and kitchen fittings Built-in cupboards were looked into but no stored items were moved. Kitchen units were visually inspected excluding appliances. The internal doors are of timber panel and timber and glazed panel design. There are timber frames, facings and skirting boards. Within the kitchen there are fitted units at base level. A timber staircase leads from the ground to the upper floors. A further timber staircase leads from the ground to the basement floor. Chimney breasts and fireplaces Visually inspected. No testing of the flues or fittings was carried out. There is a gas fireplace in the sitting room at the rear of the

building. There are open fireplaces within some of the bedrooms and the living room. All of the above would appear to be flued through the respective chimneys. Remaining fireplaces have been blocked up.

Internal decorations Visually inspected. The internal surfaces have been finished with emulsion paint. Internal timbers have a painted/varnished finish.

Cellars Visually inspected where there was a safe and purposebuilt access. There are basement cellars pertaining to the subject property. These are accessed from the door externally or from the staircase leading from the hall at ground floor level. There are flagstone floors and the walls have predominantly been plaster lined. The basement areas would appear to comprise the storage/workshop areas along with a utility room. There is a further snooker/multi-purpose room along with a wine cellar. The basement areas would appear to benefit from power and light. There is a radiator within the snooker room.

Electricity

Accessible parts of the wiring were visually inspected without removing fittings. No tests whatsoever were carried out to the system or appliances. Visual inspection does not assess any services to make sure they work properly and efficiently and meet modern standards. If any services are turned off, the surveyor will state that in the report and will not turn them on.

The subjects are connected to the mains supply of electricity. The electrical meter and switch gear are located within the basement. There is a further consumer unit at second floor level upon the landing. Where seen, there are PVC sheath cables to 13 amp power outlets.

Gas

Accessible parts of the system were visually inspected without removing fittings. No tests whatsoever were carried out to the system or appliances. Visual inspection does not assess any services to make sure they work properly and efficiently and meet modern standards. If any services are turned off, the surveyor will state that in the report and will not turn them on.

The subjects are connected to the mains supply of gas. The gas meter is located within the basement.

Water, plumbing, bathroom fittings

Visual inspection of the accessible pipework, water tanks, cylinders and fittings without removing any insulation.

No tests whatsoever were carried out to the system or appliances.

The subjects are connected to the mains supply of water. There is a stainless steel sink unit within the kitchen. Where seen, this is fed through copper supply pipes and PVC waste pipes. Sub-floor pipework, where seen, within the basement would appear of copper construction.

Within the ground floor shower room there is a three piece suite. There is a four piece suite within the first floor interconnecting bathroom. There is a further four piece suite within the second floor bathroom.

Heating and hot water

Visual inspection of the accessible pipework, water tanks, cylinders and fittings without removing any insulation.

No tests whatsoever were carried out to the system or appliances.

The subjects are heated by way of a gas fired wet central heating system with radiators throughout. The gas fired condensing boiler is located within the basement. Hot water is stored within the copper hot water tank, insulated with spray foam and located within the utility room.

Drainage

Drainage covers etc. were not lifted.

Neither drains nor drainage systems were tested.

We assume the drainage to be to the main sewer.

Fire, smoke and burglar alarms

Visually inspected.

No tests whatsoever were carried out to the system or appliances.

All Scottish homes require a smoke alarm to be installed in the room most frequently used for living purposes and in every circulation space on each floor. A heat alarm also needs to be installed in each kitchen. The alarms need to be ceiling mounted and interlinked. Where there is a carbonfuelled appliance such as a boiler, open fire or wood burner, a carbon monoxide detector is also required. We have not assessed or tested any existing equipment and it is the purchasers responsibility to confirm that the property will comply with these standards following a change of ownership.

There would also appear to be a burglar alarm.

Any additional limits to inspection

An inspection for Japanese Knotweed was not carried out. This is a plant which is subject to control regulation, is considered to be invasive and one which can render a property unsuitable for some mortgage lenders. It is therefore assumed that there is no Japanese Knotweed within the boundaries of the property or its neighbouring property. Identification of Japanese Knotweed is best undertaken by a specialist contractor.

The property was furnished and had fitted floor coverings, therefore no detailed inspection was possible of the floors and accordingly, no comment can be made on their condition. No access was available beneath sanitary or kitchen fittings.

Windows and external doors were not all fully opened or tested.

No inspection of the sub-floor timbers was possible due to ceiling linings within the basement.

Full and safe access was not available to the roof void area due to the presence of a layer of insulation throughout/the absence of flooring or crawl boards.

Garden climbing vegetation was present on some of the external elevations. Our inspection of the building fabric to these areas was therefore restricted.

We were not able to fully inspect all areas of boundary walls/garden/garage/outbuildings due to garden vegetation/restricted access.

Some areas of the external building fabric including some roof pitches/chimneys/elevations were not fully or closely inspectable from the surrounding ground level, due to the confines of the site.

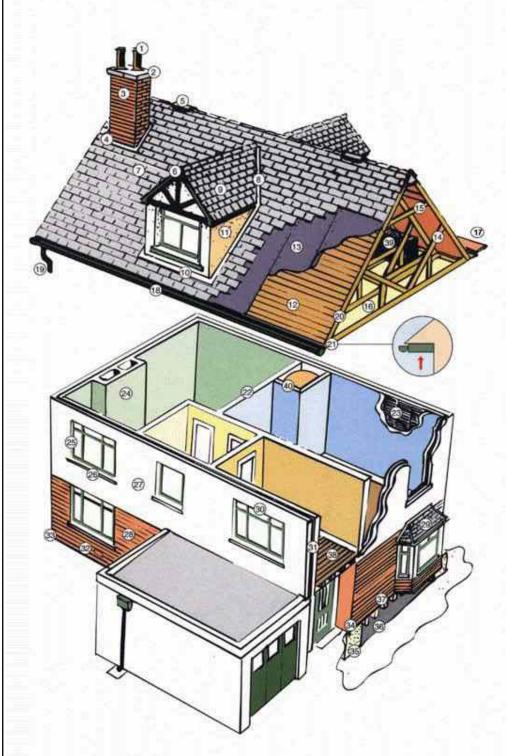

No inspection has been possible to flooring timbers beneath any sanitary fitting, kitchen appliances or other wet areas was possible. Timbers are assumed to be in a satisfactory condition.

The cold water rising main was not fully inspectable.

Flat roof coverings were not inspectable.

No access was gained to the courtyard area to the rear of the north most gable projection.

Sectional Diagram showing elements of a typical house

Reference may be made in this report to some or all of the above component parts of the property. This diagram may assist you in locating and understanding these items.

- Chimney pots
- Coping stone
- Chimney head
- Flashing
- Ridge ventilation
- Ridge board
- Slates / tiles
- 8) Valley guttering

- Trusses
- Collar
- Insulation
- Parapet gutter
- **Eaves guttering**
- Rainwater downpipe
- Verge boards/skews
- Soffit boards
- 22) Partition wall
- Lath / plaster
- Chimney breast
- Window pointing
- Window sills
- Rendering
- Brickwork / pointing
- Bay window projection
- Lintels
- Cavity walls / wall ties
- Subfloor ventilator
- Damp proof course
- Base course
- **Foundations**
- Solum
- Floor joists
- Floorboards
- Water tank
- Hot water tank

2. Condition

This section identifies problems and tells you about the urgency of any repairs by using one of the following three categories:

Category 3	Category 2	Category 1
	Repairs or replacement requiring future attention, but estimates are still advised.	

Structural movement		
Repair category	1	
Notes	Evidence of settlement/movement has affected the building reflected by slopes to the floors and the door frames/internal joinery. Externally slight slopes to lintels and sills were noted. On the basis of a single inspection this appears longstanding with no evidence of recent movement apparent.	

Dampness, rot and infestation	
Repair category	3
Notes	Above average damp readings were obtained to sections of wall lining within various apartments throughout the subject property. Decay was noted to the staircase leading from the ground floor to the basement cellars. Mould/fungal growth was noted to the wall linings within the basement cellar area. A check of the entire property should be carried out by a reputable timber and damp specialist prior to purchase who can advise upon all necessary remedial work. Our valuation assumes no significant liability in respect of timber defects. Traces of wood bore infestation were noted to some of the internal joinery along with the roof timbers. In the absence of valid guarantees for previous timber specialist treatment works, a reputable timber specialist should carry out a full and thorough inspection of all timbers within the property and provide estimates for any recommended remedial works. There is evidence of previous damp/timber specialist treatment works having been carried out and guarantee documentation should be obtained. If valid guarantees are not available, a precautionary check of the property including previous repairs should be carried out by a reputable timber and damp specialist contractor.

Chimney stacks	
Repair category	1
Notes	Our inspection of chimneys was limited but they are of an age and style where a degree of regular ongoing maintenance should be anticipated. Areas of weathered pointing were noted.
	Movement appears to have occurred to the south-most chimneyhead. On the basis of a single, superficial inspection, this appears longstanding.

Roofing including roof space	
Repair category	2
Notes	Some loose, chipped and broken roof slates and components were visible. Roof coverings are of an age and style where a degree of regular ongoing maintenance should be anticipated. More extensive overhaul work may be required in future. Slight unevenness was noted to the ridge line. Areas of open ridge mortar were noted.
	There is a flat roof over the rear projection along with a shallow pitched, felt clad roof over the rear dormer projection. It should be appreciated that this type of covering can have a limited life span and will require a higher than normal degree of ongoing maintenance and eventual replacement. It may be prudent to confirm the service history of the roof covering.
	From our restricted roof void inspection, evidence of wood boring insect activity was noted to the timbers (see section "Dampness, Rot and Infestation"). Some replacement sarking timbers were noted along with a felt overlay above the sarking and below the slates. Some damp staining was noted to the original sarking along with corrosion to the original nail ends.
	In a property of this type and age, the maintenance liabilities of the roof structure and covering should be considered with a regular maintenance program carried out by a reputable firm of roofing contractors on a regular (annual) basis.

Rainwater fittings	
Repair category	1
Notes	We would highlight that it was not raining at the time of our inspection and we would recommend that all rainwater fittings be inspected during heavy rainfall in order to ensure they are free from defect. Rainwater goods have suffered a degree of corrosion. Maintenance is required and gutters/downpipes checked during heavy rainfall

Main walls	
Repair category	2
Notes	Weathered/worn mortar joints were noted to external walls and repairs are required. Repairs to traditional stone materials can be expensive, particularly to ornate finishes. Some climbing plants were noted on the elevations. These should be regularly cut back to prevent damage to the general fabric of the building.

Windows, external doors and joinery	
Repair category	2
Notes	Windows are of an older style/single glazed/timber framed/sash and case design and a degree of regular ongoing maintenance may be required including attention to framework, sash cords and other components. It would appear repainting has recently been carried out to the internal sections of the timber window frames. Externally, some soft timbers were noted.
	Corrosion was noted to the metal skylight at top floor level.
	The external door within the north most projection is insubstantial and should be replaced.

External decorations	
Repair category	2
Notes	The external décor is weathered. Painted timbers will require future redecoration to prevent decay to the timbers.

Conservatories/porches	
Repair category	2
Notes	The entrance porch is of a lightweight/insubstantial construction type. Accordingly, insulation qualities may be limited and the structure will require a degree of regular ongoing maintenance. Flat roof coverings will have a limited lifespan and will eventually require replacement. Weed growth within the gutters should be removed.

Communal areas	
Repair category	N/A
Notes	

Garages and permanent outbuildings	
Repair category	2
Notes	Normal maintenance will be required to the garage/outbuildings. Some spalling brickwork/weathered pointing were noted to the garage walls. The slate roofs over the outbuildings/stores will require regular, ongoing maintenance. Internally where seen, some wood boring insect activity was noted to the timbers along with staining to the roof timbers. No access was gained to the southern most area within the external store. A missing pane of glass was noted to one of the windows to the rear entrance door.

Outside areas and boundaries	
Repair category	2
Notes	Boundary walls and fences should be regularly checked and maintained as necessary. Areas of open, weathered and cracked pointing were noted to the boundary walls. The cracking was most prevalent within close proximity to a number of mature trees. Repairs will be required. Mature trees/vegetation within the grounds of the property will require future ongoing professional maintenance by an experienced contractor.

Ceilings	
Repair category	2
Notes	Within the limitations of our inspection no significant defects were noted.
	Notwithstanding the above, timber linings to the ceiling within the north most projection and the ground floor shower room will constitute a hazard in the event of a fire.

Internal walls	
Repair category	1
Notes	Within the limitations of our inspection no significant defects were noted. (Notwithstanding the comments in the "Dampness, rot and infestation" section of this report).

Floors including sub-floors	
Repair category	2
Notes	Due to fitted carpets and floor coverings no detailed inspection of floors was possible and accordingly no comment can be made on their condition. Notwithstanding the above, slopes to floors were noted. No inspection of the sub-floor timbers was possible as the ceiling within the
	basement cellar has been plaster lined.

Internal joinery and kitchen fittings	
Repair category	2
Notes	Low level internal glazing should be checked for safety glass.
	Internal joinery is generally serviceable however some wear and tear items were noted to internal doors/facings etc. and future maintenance or upgrading should be anticipated.
	A number of the door frames were noted to be off level with some ill-fitting internal doors.
	The tread to the basement stair will require to be strengthened. Evidence of wood boring insect activity was noted to the timbers along with areas of timber decay. (See Section "Dampness, rot and infestation").
	The kitchen units appear to have recently been replaced although there is limited storage.

Chimney breasts and fireplaces		
Repair category	2	
Notes	It is assumed that the gas fire has been installed in accordance with the manufacturer's recommendations for fluing and ventilation and that this has been regularly checked and tested. All test documentation should be obtained and authenticated at the point of sale. In the absence of any such documentation, the appliance should be tested by a registered engineer prior to use. The fireplace would appear in excess of fifteen year old. All flue linings should be checked, repaired if necessary and swept prior to fires/appliances being reused. Remaining fireplaces have been removed/covered over. It is assumed that the chimneys are adequately vented with the chimneys capped. Ventilators should be fitted to prevent the build-up of dampness within the chimney flue.	

Internal decorations	
Repair category	1
Notes	The subjects would appear to have recently been redecorated.
	Staining was noted to the ceiling within the utility area and the cupboard within the basement. These areas appeared dry at the date of inspection.

Cellars	
Repair category	2
Notes	We would refer to section "Dampness, Rot and Infestation." Mould/fungal growth was noted to wall linings. Staining was noted to the timbers and some ceiling linings, where seen. Our inspection throughout was restricted due to a number of stored items. Where seen, evidence of wood bore insect activity was further noted.

Electricity	
Repair category	1
Notes	The Institution of Engineering Technology recommends that inspections and testings are undertaken at least every five years and on a change of occupancy. It should be appreciated that only the most recently constructed or re-wired properties will have installations which fully comply with IET regulations. Some older style plug sockets were noted.

Gas	
Repair category	1
Notes	In the interests of safety and in light of recent regulations it would be prudent to have all gas appliances checked by a Gas Safe registered contractor.

Water, plumbing and bathroom fittings	
Repair category	1
Notes	No tests have been undertaken of the system, however within the limitations of our inspection, no significant defects were noted. No inspection has been possible to enclosed timbers beneath wet appliances and no comment has been made on the condition of unseen areas. Watertight seals will require to be regularly checked and replaced, to prevent water damage to adjoining areas. The cold water rising main was not fully inspectable. A lead pipe was noted within the basement, although this would appear to
	have been disconnected. The bathroom suites would appear in excess of 10 years old. Staining was noted to the ceiling within the utility room directly below the first floor bathroom. Regular attention will be required to the seals within all
	wet areas and no inspections were possible of any of the enclosed timbers. These areas are assumed to be in satisfactory condition. The staining appeared dry at the date of inspection.

Heating and hot water		
Repair category	1	
Notes	It is assumed that the central heating system has been properly installed, updated and maintained to meet with all current regulations and standards with particular regard to fluing and ventilation requirements. Service records should be obtained and checked. In the absence of service documentation further advice should be obtained from a qualified heating engineer to ascertain the condition, efficiency, and life expectancy of the system. The area of ceiling above the central heating boiler may contain asbestos material. The current informed view is that if left undisturbed, this should present no significant hazard to health. Repair/removal should only be carried out by a competent contractor.	

Drainage	
Repair category	1
Notes	All foul and surface water drainage is assumed to be to the main public sewer. The system was not tested.

Set out below is a summary of the condition of the property which is provided for reference only. You should refer to the previous comments for detailed information.

Structural movement	1
Dampness, rot and infestation	3
Chimney stacks	1

Gas	1
Water, plumbing and bathroom fittings	1
Heating and hot water	1
Drainage	1

Category 3

Urgent repairs or replacement are needed now. Failure to deal with them may cause problems to other parts of the property or cause a safety hazard. Estimates for repairs or replacement are needed now.

Category 2

Repairs or replacement requiring future attention, but estimates are still advised.

Category 1

No immediate action or repair is needed.

Remember

The cost of repairs may influence the amount someone is prepared to pay for the property. We recommend that relevant estimates and reports are obtained in your own name.

Warning

If left unattended, even for a relatively short period, Category 2 repairs can rapidly develop into more serious Category 3 repairs. The existence of Category 2 or Category 3 repairs may have an adverse effect on marketability, value and the sale price ultimately achieved for the property. This is particularly true during slow market conditions where the effect can be considerable.

3. Accessibility information

Guidance notes on accessibility information

Three steps or fewer to a main entrance door of the property:

In flatted developments the 'main entrance' would be the flat's own entrance door, not the external door to the communal stair. The 'three steps or fewer' are counted from external ground level to the flat's entrance door. Wherea lift is present, the count is based on the number of steps climbed when using the lift.

Unrestricted parking within 25 metres:

For this purpose, 'Unrestricted parking' includes parking available by means of a parking permit. Restricted parking includes parking that is subject to parking restrictions, as indicated by the presence of solid yellow, red or white lines at the edge of the road or by a parking control sign, parking meters or other coin-operated machines.

1. Which floor(s) is the living accommodation on? Ground, First and S		and Se	econd	
2. Are there three steps or fewer to a main entrance door of the property?			No	X
3. Is there a lift to the main entrance door of the property?			No	X
4. Are all door openings greater than 750mm?			No	X
5. Is there a toilet on the same level as the living room and kitchen?		X	No	
6. Is there a toilet on the same level as a bedroom?	Yes	X	No	
7. Are all rooms on the same level with no internal steps or stairs?			No	X
8. Is there unrestricted parking within 25 metres of an entrance door to the building?		X	No	

4. Valuation and conveyancer issues

This section highlights information that should be checked with a solicitor or licensed conveyancer. It also gives an opinion of market value and an estimated reinstatement cost for insurance purposes.

Matters for a solicitor or licensed conveyancer

An interconnecting bathroom has been formed at first floor level. It is assumed that all alterations, additions and/or extensions to the property have received all necessary Town Planning (Planning Permission) and Building Authority (Building Warrants and Completion Certificate) approvals and that documentation for such is available.

Confirmation of the maintenance liabilities/rights of access for the occupier of the subject property over the garden grounds of neighbouring properties should be established via the Title Deeds.

The property and boundary walls are understood to be listed (Grade B) and as such the cost of repair or reinstatement works are likely to be higher than normal. Any works considered necessary will require to be carried out in consultation with the Local Authority Planning Department and Historic Environment Scotland.

Previous timber/damp specialist treatment works have been carried out within the property and it is assumed that all specialist reports and guarantees are available and in order. Confirmation should be obtained. Notwithstanding the above, we would advise a reputable firm of timber/damp specialist contractors be instructed to carry out a full and thorough inspection of the whole property prior to purchase and advise upon all necessary remedial work. Our valuation assumes no significant liability in respect of timber defects.

Where defects or repairs have been identified within this report it is recommended that, prior to entering into any legally binding sale or purchase contract, further specialist's or contractor's advice and estimates should be obtained, to establish the implications, if any, on a potential offer to purchase or the sale price likely to be achieved for the property.

It is assumed that there are no statutory, town planning, road proposals or environmental matters which are likely to have an adverse effect on the property.

The road and footpath adjoining the site are made up and are assumed to be adopted by the Local Authority.

Estimated reinstatement cost for insurance purposes

For Reinstatement Cost Assessment purposes, it is recommended that the subjects be insured for a sum of not less than £2,000,000 (TWO MILLION POUNDS STERLING).

This figure is the estimate of the cost of rebuilding the premises and bears no direct relationship to current market value.

Valuation and market comments

Having considered matters, taking account of our general observations on site, we are of the opinion that the Market Value of the subjects in their present condition and with the benefit of vacant possession may be fairly stated in the sum of £460,000 (FOUR HUNDRED AND SIXTY THOUSAND POUNDS STERLING).

General Remarks

The subjects form part of a mixed commercial and residential area located a short distance to the north of Aberdeen City Centre, on the periphery of the University of Aberdeen campus. The subjects do lie immediately adjacent to St. Machar Drive which is a reasonably busy thoroughfare within the city. Adequate facilities and amenities may be found within reasonable distance.

An interconnecting bathroom has been formed at first floor level. It is assumed that all alterations, additions and/or extensions to the property have received all necessary Town Planning (Planning Permission) and Building Authority (Building Warrants and Completion Certificate) approvals and that documentation for such is available.

Confirmation of the maintenance liabilities/rights of access for the occupier of the subject property over the garden grounds of neighbouring properties should be established via the Title Deeds.

The property and boundary walls are understood to be listed (Grade B) and as such the cost of repair or reinstatement works are likely to be higher than normal. Any works considered necessary will require to be carried out in consultation with the Local Authority Planning Department and Historic Environment Scotland.

Previous timber/damp specialist treatment works have been carried out within the property and it is assumed that all specialist reports and guarantees are available and in order. Confirmation should be obtained.

Where defects or repairs have been identified within this report it is recommended that, prior to entering into any legally binding sale or purchase contract, further specialist's or contractor's advice and estimates should be obtained, to establish the implications, if any, on a potential offer to purchase or the sale price likely to be achieved for the property.

It is assumed that there are no statutory, town planning, road proposals or environmental matters which are likely to have an adverse effect on the property.

The road and footpath adjoining the site are made up and are assumed to be adopted by the Local Authority.

At the time of inspection the property was found to be in a condition generally consistent with its age and type of construction but some elements of the property are aging and likely to require attention. Given the size of the property and listed building status, the costs of such works will be significant.

Essential Repairs	
	nber/damp specialist contractors be instructed to carry out a full and thorough inspection of the whole upon all necessary remedial work. Our valuation assumes no significant liability in respect of timber
Estimated cost of essential repairs	N/A
Retention recommended?	X Yes No
Retention amount	£20,000
Comment on Mortgageabilit	у

The property forms suitable security for mortgage purposes subject to the specific lending criteria of any mortgage provider.

Valuation £ 460,000 Market value in present condition £ 480,000 Market value on completion of essential repairs £ 480,000 Insurance reinstatement value £ 2,000,000

(to include the cost of total rebuilding, site clearance, professional fees, ancillary charges plus VAT)

Is a reinspection necessary?

Approved Organisation: Elmhurst

Main heating and fuel: Boiler and radiators, mains

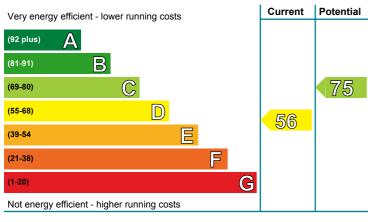

gas

You can use this document to:

- . Compare current ratings of properties to see which are more energy efficient and environmentally friendly
- Find out how to save energy and money and also reduce CO₂ emissions by improving your home

Estimated energy costs for your home for 3 years*	£13,788	See your recommendations
Over 3 years you could save*	£4,596	report for more information

^{*} based upon the cost of energy for heating, hot water, lighting and ventilation, calculated using standard assumptions

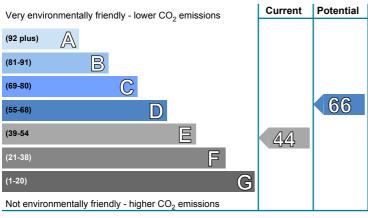

Energy Efficiency Rating

This graph shows the current efficiency of your home, taking into account both energy efficiency and fuel costs. The higher this rating, the lower your fuel bills are likely to be.

Your current rating is **band D (56)**. The average rating for EPCs in Scotland is **band D (61)**.

The potential rating shows the effect of undertaking all of the improvement measures listed within your recommendations report.

Environmental Impact (CO₂) Rating

This graph shows the effect of your home on the environment in terms of carbon dioxide (CO_2) emissions. The higher the rating, the less impact it has on the environment.

Your current rating is **band E (44)**. The average rating for EPCs in Scotland is **band D (59)**.

The potential rating shows the effect of undertaking all of the improvement measures listed within your recommendations report.

Top actions you can take to save money and make your home more efficient

Recommended measures	Indicative cost	Typical savings over 3 years
1 Room-in-roof insulation	£1,500 - £2,700	£1089.00
2 Internal or external wall insulation	£4,000 - £14,000	£2949.00
3 Secondary glazing to single glazed windows	£1,000 - £1,500	£561.00

A full list of recommended improvement measures for your home, together with more information on potential cost and savings and advice to help you carry out improvements can be found in your recommendations report.

To find out more about the recommended measures and other actions you could take today to stop wasting energy and money, visit greenerscotland.org or contact Home Energy Scotland on 0808 808 2282.

THIS PAGE IS THE ENERGY PERFORMANCE CERTIFICATE WHICH MUST BE AFFIXED TO THE DWELLING AND NOT BE REMOVED UNLESS IT IS REPLACED WITH AN UPDATED CERTIFICATE

Summary of the energy performance related features of this home

This table sets out the results of the survey which lists the current energy-related features of this home. Each element is assessed by the national calculation methodology; 1 star = very poor (least efficient), 2 stars = poor, 3 stars = average, 4 stars = good and 5 stars = very good (most efficient). The assessment does not take into consideration the condition of an element and how well it is working. 'Assumed' means that the insulation could not be inspected and an assumption has been made in the methodology, based on age and type of construction.

Element	Description	Energy Efficiency	Environmental
Walls	Granite or whinstone, as built, no insulation (assumed)	***	***
Roof	Pitched, no insulation (assumed) Roof room(s), insulated	****	*****
Floor	Suspended, no insulation (assumed) Solid, no insulation (assumed)	_ _	_ _
Windows	Some double glazing	****	****
Main heating	Boiler and radiators, mains gas	****	***☆
Main heating controls	Programmer, room thermostat and TRVs	****	***☆
Secondary heating	None	_	_
Hot water	From main system	****	***☆
Lighting	Low energy lighting in 79% of fixed outlets	****	****

The energy efficiency rating of your home

Your Energy Efficiency Rating is calculated using the standard UK methodology, RdSAP. This calculates energy used for heating, hot water, lighting and ventilation and then applies fuel costs to that energy use to give an overall rating for your home. The rating is given on a scale of 1 to 100. Other than the cost of fuel for electrical appliances and for cooking, a building with a rating of 100 would cost almost nothing to run.

As we all use our homes in different ways, the energy rating is calculated using standard occupancy assumptions which may be different from the way you use it. The rating also uses national weather information to allow comparison between buildings in different parts of Scotland. However, to make information more relevant to your home, local weather data is used to calculate your energy use, CO₂ emissions, running costs and the savings possible from making improvements.

The impact of your home on the environment

One of the biggest contributors to global warming is carbon dioxide. The energy we use for heating, lighting and power in our homes produces over a quarter of the UK's carbon dioxide emissions. Different fuels produce different amounts of carbon dioxide for every kilowatt hour (kWh) of energy used. The Environmental Impact Rating of your home is calculated by applying these 'carbon factors' for the fuels you use to your overall energy use.

The calculated emissions for your home are 57 kg CO₂/m²/yr.

The average Scottish household produces about 6 tonnes of carbon dioxide every year. Based on this assessment, heating and lighting this home currently produces approximately 16 tonnes of carbon dioxide every year. Adopting recommendations in this report can reduce emissions and protect the environment. If you were to install all of these recommendations this could reduce emissions by 6.6 tonnes per year. You could reduce emissions even more by switching to renewable energy sources.

Estimated energy costs for this home

	Current energy costs	Potential energy costs	Potential future savings
Heating	£12,510 over 3 years	£7,896 over 3 years	
Hot water	£627 over 3 years	£630 over 3 years	You could
Lighting	£651 over 3 years	£666 over 3 years	save £4,596
Totals	£13,788	£9,192	over 3 years

These figures show how much the average household would spend in this property for heating, lighting and hot water. This excludes energy use for running appliances such as TVs, computers and cookers, and the benefits of any electricity generated by this home (for example, from photovoltaic panels). The potential savings in energy costs show the effect of undertaking all of the recommended measures listed below.

Recommendations for improvement

The measures below will improve the energy and environmental performance of this dwelling. The performance ratings after improvements listed below are cumulative; that is, they assume the improvements have been installed in the order that they appear in the table. Further information about the recommended measures and other simple actions to take today to save money is available from the Home Energy Scotland hotline which can be contacted on 0808 808 2282. Before carrying out work, make sure that the appropriate permissions are obtained, where necessary. This may include permission from a landlord (if you are a tenant) or the need to get a Building Warrant for certain types of work.

Recommended measures		Indicative cost	Typical saving	Rating after improvement		
		Indicative cost	per year	Energy	Environment	
1	Room-in-roof insulation	£1,500 - £2,700	£363	D 59	E 48	
2	Internal or external wall insulation	£4,000 - £14,000	£983	C 69	D 60	
3	Secondary glazing to single glazed windows	£1,000 - £1,500	£187	C 71	D 63	
4	Solar photovoltaic panels, 2.5 kWp	£3,500 - £5,500	£420	C 75	D 66	

Choosing the right improvement package

About the recommended measures to improve your home's performance rating

This section offers additional information and advice on the recommended improvement measures for your home

1 Room-in-roof insulation

Insulating roof rooms will significantly reduce heat loss; this will improve levels of comfort, reduce energy use and lower fuel bills. If it has a flat ceiling insulation can usually be added above the ceiling, and sloping ceilings and walls of roof rooms can be insulated using an internal lining board. Roof voids must have adequate ventilation to prevent dampness; seek advice about this if unsure. Further information about roof room insulation and details of local contractors can be obtained from the National Insulation Association (www.nationalinsulationassociation.org.uk). Building regulations generally apply to this work so it is best to check this with your local authority building standards department.

2 Internal or external wall insulation

Internal or external wall insulation involves adding a layer of insulation to either the inside or the outside surface of the external walls, which reduces heat loss and lowers fuel bills. As it is more expensive than cavity wall insulation it is only recommended for walls without a cavity, or where for technical reasons a cavity cannot be filled. Internal insulation, known as dry-lining, is where a layer of insulation is fixed to the inside surface of external walls; this type of insulation is best applied when rooms require redecorating. External solid wall insulation is the application of an insulant and a weather-protective finish to the outside of the wall. This may improve the look of the home, particularly where existing brickwork or rendering is poor, and will provide long-lasting weather protection. Further information can be obtained from the National Insulation Association (www.nationalinsulationassociation.org.uk). It should be noted that a building warrant is required for the installation of external wall insulation. Planning permission may also be required and that building regulations apply to external insulation so it is best to check with your local authority on both issues.

3 Secondary glazing

Secondary glazing is the addition of a second pane of glass inside the existing window. Adding secondary glazing will improve comfort in the home by reducing draughts and cold spots near windows. It may also reduce noise and combat problems with condensation. Installation can be carried out by a competent DIY enthusiast. Building regulations may apply to this work, so it is best to check with your local authority building standards department.

4 Solar photovoltaic (PV) panels

A solar PV system is one which converts light directly into electricity via panels placed on the roof with no waste and no emissions. This electricity is used throughout the home in the same way as the electricity purchased from an energy supplier. Planning permission might be required, building regulations generally apply to this work and a building warrant may be required, so it is best to check with your local authority. The assessment does not include the effect of any Feed-in Tariff which could appreciably increase the savings that are shown on this EPC for solar photovoltaic panels, provided that both the product and the installer are certified by the Microgeneration Certification Scheme (or equivalent). Details of local MCS installers are available at www.microgenerationcertification.org.

Low and zero carbon energy sources

Low and zero carbon (LZC) energy sources are sources of energy that release either very little or no carbon dioxide into the atmosphere when they are used. Installing these sources may help reduce energy bills as well as cutting carbon.

LZC energy sources present: There are none provided for this home

Your home's heat demand

In this section, you can see how much energy you might need to heat your home and provide hot water. These are estimates showing how an average household uses energy. These estimates may not reflect your actual energy use, which could be higher or lower. You might spend more money on heating and hot water if your house is less energy efficient. The table below shows the potential benefit of having your loft and walls insulated. Visit https://energysavingtrust.org.uk/energy-at-home for more information.

Heat demand	Existing dwelling	Impact of loft insulation	Impact of cavity wall insulation	Impact of solid wall insulation
Space heating (kWh per year)	60,791	(5,474)	N/A	(14,880)
Water heating (kWh per year)	3,039			

Addendum

This dwelling has stone walls and so requires further investigation to establish whether these walls are of cavity construction and to determine which type of wall insulation is best suited.

About this document

This Recommendations Report and the accompanying Energy Performance Certificate are valid for a maximum of ten years. These documents cease to be valid where superseded by a more recent assessment of the same building carried out by a member of an Approved Organisation.

The Energy Performance Certificate and this Recommendations Report for this building were produced following an energy assessment undertaken by an assessor accredited by Elmhurst (www.elmhurstenergy.co.uk), an Approved Organisation Appointed by Scottish Ministers. The certificate has been produced under the Energy Performance of Buildings (Scotland) Regulations 2008 from data lodged to the Scottish EPC register. You can verify the validity of this document by visiting www.scottishepcregister.org.uk and entering the report reference number (RRN) printed at the top of this page.

Address:

Mr. John Nicol

EES/014517

J & E Shepherd

13 Albert Square

Dundee DD1 1XA

Phone number: 01382 200454

Email address: dundee@shepherd.co.uk

Related party disclosure: No related party

If you have any concerns regarding the content of this report or the service provided by your assessor you should in the first instance raise these matters with your assessor and with the Approved Organisation to which they belong. All Approved Organisations are required to publish their complaints and disciplinary procedures and details can be found online at the web address given above.

Use of this energy performance information

Once lodged by your EPC assessor, this Energy Performance Certificate and Recommendations Report are available to view online at www.scottishepcregister.org.uk, with the facility to search for any single record by entering the property address. This gives everyone access to any current, valid EPC except where a property has a Green Deal Plan, in which case the report reference number (RRN) must first be provided. The energy performance data in these documents, together with other building information gathered during the assessment is held on the Scottish EPC Register and is available to authorised recipients, including organisations delivering energy efficiency and carbon reduction initiatives on behalf of the Scottish and UK governments. A range of data from all assessments undertaken in Scotland is also published periodically by the Scottish Government. Further information on these matters and on Energy Performance Certificates in general, can be found at www.gov.scot/epc.

Advice and support to improve this property

There is support available, which could help you carry out some of the improvements recommended for this property on page 3 and stop wasting energy and money. For more information, visit greeners cotland.org or contact Home Energy Scotland on 0808 808 2282.

Home Energy Scotland's independent and expert advisors can offer free and impartial advice on all aspects of energy efficiency, renewable energy and more.
